Art Unit: 1745

Claims 1-20 are objected to because of the following informalities: The term "in", in the phrase "to introduce make-up hydrogen in the motor portion", in claims 1, 8 and 19, should instead be "into", since the hydrogen is brought into the sealed assembly from an external source. Note the specification, page 6, lines 6-9. Claims 2-7, 9-18 and 20 depend from claims 1, 8 or 9, and are likewise objected to. Appropriate correction is required.

Figure 1 should be designated by a legend such as --Prior Art-- because only that which is old is illustrated. See MPEP § 608.02(g). A proposed drawing correction or corrected drawings are required in reply to the Office action to avoid abandonment of the application. The objection to the drawings will not be held in abeyance.

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Reiser *et al.* (US 4,769,297) and Grehier (US 4,075,396) disclose fuel cells with hydrogen recycle loops. Dine *et al.* (US 2002/0098393) disclose a procedure for shutting down a fuel cell with a hydrogen recycle loop. Keefer *et al.* (US 2002/0142208) disclose a fuel cell with a hydrogen separation system comprising a pressure swing absorption module. Sterchi *et al.* (US 2004/0023084) disclose a fuel cell with a hermetically sealed hydrogen pump, but is filed too recently to be presently applicable.

Claims 1-20 would be allowable if rewritten or amended to overcome the objection(s) set forth in this Office action, above. The prior art does not disclose a fuel cell with a hydrogen

recycle loop, which includes a hermetically sealed assembly including a pump and blower, into which make-up hydrogen is introduced.
